

12 two anchoring elements installed on the inner side of the lower part the frontmask,
13 the anchoring elements mating with the hooks of the computer casing, thereby securing
14 the computer casing and the frontmask; wherein,

15 to detach the frontmask, a user pulls the handle to stretch the retraction spring so that
16 the beveled surfaces lift the anchoring elements of the frontmask, thereby separating the
17 holes in the anchoring parts from the hooks of the computer casing, while simultaneously
18 the wedge-shaped push-heads of the movable device push the anchoring elements
19 outward, thereby allowing easy removal of the frontmask from the computer casing.

1 4. (New) The device for quickly detaching and reassembling the frontmask of a
2 computer casing in accordance to Claim 3, wherein the wedge-shaped push-heads of the
3 movable device are shaped as a reversed L.
